

FOR DISTRIBUTORS, BOOKSELLERS AND LIBRARIANS

www.destechpub.com

2017

CONTENTS

Welcome to DEStech Publications' complete 2017 Publications Catalog. It describes all books, CD-ROMs, and journals we currently publish as well as upcoming titles with future publication dates.

The Contents section directly below gives an overview of all book and publication categories in this catalog and where to find short descriptions of each product in the category.

Detailed information on all DEStech Publications' titles is also available to you on our website: www.destechpub.com.

The primary aim of DEStech Publications is to provide reliable information on developments in advanced technologies and engineering. You are invited to view the following pages to find publications that will be useful to you.

In the U.S., Canada, and Australia, distributors, booksellers, librarians, and cataloguers are invited to contact us for discounts and availability of all titles. For outside the U.S., Canada, and Australia, please see page 52 for a complete listing of our International Distributors.

NOTE: Prices and publication details are subject to change without notice.

Contents

Subject sections list titles in order starting with most current.

ADVANCED MATERIALS

DEStech Publications and the American Society for Composites are proud to announce the "ASC Series on Advances in Composite Materials." These volumes consist of select definitive papers from past conferences.

Volume 1: Dynamic Effects in Composites

Edited by: Dahsin Liu; Managing Editor: Michael Hyer

Book comprises multiple investigations into dynamic loading's effects on composite materials. With approaches ranging from weight drop to high-velocity and high-impact testing, as well as FEM and other analytic techniques, leading researchers explain damage, delamination and other effects in a variety of composites types and configurations.

978-1-60595-072-3, ©2012, 306 pages, 6x9, SC book, **\$84.50**

Volume 2: Nanocomposites

Edited by: Tsu-Wei Chou and Chin-Teh Sun; Managing Editor: Michael Hyer

Second ASC series volume concentrates on using carbon- and silicon-based nanotubes, nanofibers and graphene sheets to improve the performance and properties of composites materials. The book covers all phases of nanocomposite synthesis--from design and multiscale modeling to processing and testing. Special attention is given to problems of dispersion and interfacial bonding and to using nanoparticles to enhance the electrical and mechanical properties of composites.

978-1-60595-073-0, ©2012, 240 pages, 6x9, SC book, **\$84.50**

Volume 3: Fatigue of Composite Materials

Edited by: Ronald Gibson; Managing Editor: Michael Hyer

Presents unpublished investigations of fatigue modeling, behavior and experimental characterization. Covers prediction of fatigue life and crack growth, with new data on characterization and fatigue in composite laminates, joints, graphite, carbon nanotubes and full-scale structures.

978-1-60595-085-3, ©2013, 234 pages, 6x9, SC book, **\$84.50**

Volume 4: Failure in Composites

Edited by: Anthony M. Waas and Bhavani V. Sankar; Managing Editor: Michael Hyer

The fourth volume of the ASC series contains critical information on static and dynamic composite failure and how it is predicted and modeled using novel computational methods and micromechanical analysis. Covers failure mechanisms for plates, tubes, panels, noncircular cylinders, and sandwich composite damage from projectile impact, crushing, and torsion.

978-1-60595-089-1, ©2013, 282 pages, 6x9, SC book, **\$84.50**

Volume 5: Damage of Composites

Edited by: Bhavani V. Sankar and Anthony M. Waas; Managing Editor: Michael Hyer

Volume 5 of the ASC series presents original and path-breaking recent work on composite damage analysis, using empirical test methods and computational models. This book was developed by the editors as a complement to Volume 4 on failure in composite materials.

978-1-60595-088-4, ©2013, 304 pages, 6x9, SC book, **\$84.50**

Volume 6: Manufacturing of Composites

Edited by: Alfred C. Loos; Managing Editor: Michael Hyer

Book comprises 16 original papers on the processing and manufacturing of thermoset and thermoplastic composites. Nine chapters cover modeling and process parameters for many shapes of thermosets using RTM, VARTM and CRTM. Five chapters focus on thermoplastics, including FEM analysis, preforms, and optimizing manufacturing. The book concludes with important chapters on new processes, such as vacuum-bag-only prepreps (VBO) for out-of-autoclave (OOA) fabrication of aerospace composites.

978-1-60595-099-0, ©2013, 288 pages, 6x9, SC book, **\$84.50**

ADVANCED MATERIALS

2017

American Society for Composites—Thirty-second Technical Conference

Proceedings, October 22-25, 2017, West Lafayette, IN

Edited by: Wenbin Yu, R. Byron Pipes and Johnathan Goodsell

Original research reports from U.S. and Canadian universities are included in this publication. It focuses on the design, manufacturing and testing of advanced composite materials, including ways of monitoring composite fabrication parameters and functionalizing composites' properties.

978-1-60595-418-9, Oct. 2017, CD-ROM in plastic jewel case, **\$175.00**

Asphalt Paving Technology 2016

Volume 85, Journal of the Association of Asphalt Paving Technologists

Edited by: Eugene L. Skok

Refereed papers investigate asphalt mixes, test methods, pavement performance, and experimental binders, such as recycled oil, with a special reference section on balanced mixed design.

978-1-60595-404-2, February 2017, 925 pages, 6x9, HC book/CD-ROM, **\$200.00**

Ballistics 2017

30th International Symposium, September 11-15, 2017, Long Beach, California

Edited by: Sidney Chocron and James Walker

This latest edition includes the most current state-of-the-art technology in Ballistics, the books contain original research papers on all phases of ballistics, topics include interior and exterior ballistics, launch dynamics, vulnerability, terminal ballistics and impact physics and explosion mechanics.

978-1-60595-419-6, Sept. 2017, 1,440 pages, 2 volumes, 6x9, HC book, **\$309.50**

Design, Manufacturing and Applications of Composites

Proceedings of the Joint Canada-Japan-Vietnam Workshop on Composites

August 8-10, 2016, Ho Chi Minh City, Vietnam

Edited by: Suong V. Hoa, Hiroyuki Hamada and Huynh Dai Phu

The joint Canada-Japan-Vietnam workshop on composites is a continuation of the series of Canada-Japan workshops on composites held every two years since 1996. The workshop in 2016 was held in Vietnam, and involved a third country (Vietnam). The proceedings contain papers from scientists and engineers from the three countries. It covers many aspects on composites, with emphasis on composites made from natural resources such as fibers and resins.

978-1-60595-326-7, ©2017, 436 pages, 6x9, SC book, **\$175.00**

Essentials of the Mechanics of Materials

Third Edition

George Frantziskonis

The latest edition of this textbook includes expanded problem sets and materials for instructors. The book is well suited for both onsite and distance-university courses, because it clearly and concisely presents the theoretical concepts and equations that illustrate the behavior of material structures under standard stresses and strains. For students in civil, environmental and chemical engineering.

978-1-60595-414-1, March 2017, 350 pages, 8.5x11, SC book, **\$74.50**

Online eBook: 978-1-60595-430-1, **\$54.50**

ADVANCED MATERIALS

2017

Ferroelectric Devices & Piezoelectric Actuators

Principles, Problems and Common Misconceptions

Kenji Uchino

Investigates basic principles and shared understandings regarding the materials and properties of piezoelectrics and dielectrics, including concepts such as electrostriction, ionic displacement strain, transmission coefficient, constraint dependency, mechanical impedance matching and more. The author demonstrates how misuse of selected ideas and formulas can negatively influence research and shows how to correct these faulty approaches. The volume also contains problems and solutions associated with the design and performance of dielectrics, memory devices, piezoelectrics, electrooptic and pyroelectric devices and more.

978-1-60595-312-0, ©2017, 252 pages, 6x9, SC book, **\$89.50**

Fundamentals of Electrospinning & Electrospun Nanofibers

Tong Lin, Jian Fang

This book reviews and analyzes the methods whereby nanofibers are spun, collected and fabricated into various fibrous structures. Explains the workings, quantitative specifications and set-up of virtually all formation technologies, including solvent and solvent-free, as well as needle and needleless spinning methods for nanofibers made from polymers, carbon and other materials. Practical information is provided for understanding and designing devices to fabricate nanofibers with many different shapes and internal structures. Special attention is given to strategies for overcoming defects in nanofibers and controlling their overall quality.

978-1-60595-160-7, ©2017, 250 pages, 6x9, HC book, **\$139.50**

Principles of the Manufacturing of Composite Materials

Second, Expanded Edition

Suong V. Hoa

New composites, including conductive materials, and a variety of automated and semi-automated processes have been added to this comprehensive textbook, which explains the principles of traditional and emerging technologies for manufacturing composite materials. In this edition, polymer nanocomposites are more fully described. Out-of-autoclave methods, thermostamping, and automated fiber placement (AFP) are analyzed in greater depth, and an entire new chapter has been added on automation. An original feature of this book is description of the 4D printing technique, which combines 3D printing and automated shape configuration in a unified process.

978-1-60595-421-9, September 2017, 380 pages, 6x9, HC book, **\$189.50**

Structural Health Monitoring 2017

Proceedings of the Eleventh International Workshop, September 12-14, 2017, Stanford University

Edited by: Fu-Kuo Chang

This important series collection is available both in print as a hardcover in two volumes and as downloadable in digital format. The text features hundreds of papers detailing new research on structural health monitoring (SHM) using a variety of signal types and processing strategies. A main focus of the book is technology enabling real-time analysis and management of structures. Articles include information on applications in support of autonomous and/or intelligent systems, as well as SHM systems in aircraft, buildings, bridges, railroad and sustainable energy facilities. The volumes assess state-of-the-art technologies for sensors, waveguides, materials, energy, damage detection, testing and quality control.

978-1-60595-330-4, Sept. 2017, 3,000 pages, 2 Volumes, 6x9, HC book, **\$309.50**

Online: eProceedings, **\$245.00** (individual articles for \$25.00 each)

ADVANCED MATERIALS

2017

The Design and Application of Composite Sandwich Structures

Rik Heselehurst

Engineering text explains the theory and design equations governing different types of composite material sandwich structures. The book presents data on composite skinned structures, including details on the behavior of composites as constituent materials. A special feature is the analysis of composites as facing materials/panels. The book covers stress analysis with regard to structure failure modes, and offers guidance for designing sandwich joints, cutouts and edges. Manufacturing and quality control are also investigated.

978-1-60595-211-6, October 2017, 350 pages, 6x9, HC book, **\$159.50**

Third Symposium on Automated Composite Manufacturing (ACM3)

Edited by: Suong V. Hoa

Summarizing recent work on thermoset and thermoplastics composites manufacturing automation, this volume contains original presentations on technologies such as: automated dry fiber placement; manufacturing complex shapes; fiber steering and variable stiffness; automation equipment; mechanical performance of fiber-placed structures; and virtual manufacturing environments.

978-160595-431-8, June 2017, 260 pages, 6x9, SC book, **\$95.00**

2016

American Society for Composites—Thirty-first Technical Conference

held jointly with ASTM-D30 Meeting

Proceedings, September 19-22, 2016, Williamsburg, VA

Edited by: Barry Davidson, James Ratcliffe and Michael Czabaj

Papers on composite engineering and science including additive manufacturing, design and manufacturing, functional materials and structure, armor & protection, flammability of composites, crashworthiness, marine composites, testing and characterization, multifunctional and smart composites, textile and 3D composites, progressive damage modeling, stability & postbuckling, natural, bio-based, green, and novel composites, ACP (NASA advanced composites project), space applications, automotive composites, civil structures, micromechanics, impact & dynamic response and more.

978-1-60595-316-8, ©2016, CD-ROM in plastic jewel case, **\$209.50**

Online: eProceedings, **\$190.00** (individual articles for \$25.00 each)

Asphalt Paving Technology 2015

Volume 84, Journal of the Association of Asphalt Paving Technologists

Edited by: Eugene L. Skok

Features research presentations devoted to the chemistry, engineering, modeling and testing of asphalt materials and processing. Developments in the use of components like bio-oil are discussed, as are strategies for testing asphalt components for wear and durability at low and high temperatures.

978-1-60595-294-9, ©2016, 768 pages, 6x9, HC book/CD-ROM, **\$200.00**

Ballistics 2016

29th International Symposium, May 9-13, 2016, Edinburgh, Scotland, UK

Edited by: Clive Woodley and Ian Cullis

This recent edition offers state-of-the-art technology in Ballistics, the books contain original research papers on all phases of ballistics, topics include interior and exterior ballistics, launch dynamics, vulnerability, terminal ballistics and impact physics and explosion mechanics.

978-1-60595-317-5, ©2016, 3,870 pages, 2 volumes, 6x9, HC book, **\$309.50**

Online: eProceedings, **\$250.00** (individual articles for \$25.00 each)

ADVANCED MATERIALS

2016

DURACOSYS 2016

*12th International Conference on Durability of Composite Systems
Proceedings, June 12-15, 2016, University of Texas at Arlington*

Edited by: Ken Reifsnider

Papers presented will focus on the science, ideas, and methods that enable applications, and the challenges that result from engineering development. Topics include manufacturing: defects, modeling, remediation; light-weighting and vehicular applications, analysis methods, durability of bio-composite systems, composite materials in civil infrastructure and composites for extreme environments.

978-1-60595-318-2, ©2016, online eProceedings, **\$129.50**

Mechanical Behavior of Thick Composites

International Workshop, March 14-15, 2016, Montreal, Canada

Edited by: Suong V. Hoa, et al.

The workshop intends to provide a forum for exchange of information on latest work done to understand the mechanical behavior of thick composites (more than 3 mm thick). Topics addressed include: Applications, Manufacturing processes, Quality Inspection, Stress analysis, Fracture, Fatigue, Experimental measurements and more.

978-1-60595-319-9, ©2016, 144 pages, 6x9, SC book, **\$79.50**

Shape-Memory Polymers for Aerospace Applications

Novel Activation, Modeling, Characterization and Design

Edited by: Gyaneshwar Tandon, Amber McClung and Jeff Baur

This contributed volume investigates the parameters of shape-memory polymers (SMPs) required by aerospace, including synthesis, characterization, activation, and application in aircraft and space vehicles. It explains the chemistry and design of novel SMPs to meet the special demands of aeronautic performance, including heat and impact resistance, limited operational energies, aerodynamics, loading etc. The text analyzes and assesses shape-memory polymers and also composites and hybrid materials designed for use in reconfigurable applications in the military and commercial sectors, especially for morphing aircraft, micro air vehicles, deployable space structures, and adaptive engines. The chapters span novel synthesis, chemistry and activation of shape memory resins, constituent modeling and characterization methods, predictive methodologies, experimental validation, and case studies illustrating material property needs, design requirements and material performance.

978-1-60595-118-8, ©2016, 676 pages, 6x9, HC book, **\$209.50**

Structures in Fire

*Proceedings of the 9th International Conference (SiF'16)
June 8-10, 2016, Princeton University, Princeton, NJ*

Edited by: Maria E. Moreyra Garlock

This book offers original research on how materials integrated into a variety of structures react to fire. Based on experiments as well as model calculations, the book presents key data to engineers and fire specialists required to understand and predict the material behavior of many types of structure-embedded elements, including ones made from composites, steel, aluminum, masonry and wood.

978-1-60595-320-5, ©2016, 1,170 pages, 6x9, SC book, **\$269.00**

ADVANCED MATERIALS

2015

Adhesion Science

Principles and Practice

Steven Abbott

This important and pioneering technical book collates and explains the theoretical principles underlying adhesion and adhesives, including strong and "weak" bonds plus pressure-sensitive (PSA) across many polymer, metal and ceramic adherends. The author shows how adhesion-related chemistry and physics, clearly displayed in mathematical formulas, can clarify surface properties as well as the characteristics of good and bad adhesion, including multiple types of failure. The book provides science-based methods to predict, test and formulate adhesives. To this end, it includes access to a unique set of applied computer programs or "apps" that automate a wide range of adhesive formulas and allow engineers and formulators to input data and study the effect of adhesion properties in conjunction with and even prior to chemical compounding and empirical testing.

Print: 978-1-60595-178-2, ©2015, 320 pages, HC book, **\$158.50**

Online: eBook: 978-1-60595-228-4, **\$142.00**

American Society for Composites—Thirtieth Technical Conference

Proceedings, September 28-30, 2015, Michigan State University, Lansing, MI

Edited by: Xinran (Sharon) Xiao, Alfred Loos and Dahsin Liu

Papers on composite engineering and science including material development, processing, design and manufacturing, functional materials and structure, analysis, computation, testing, nondestructive evaluation, structure health monitoring, durability and damage tolerance, failure and fracture, fatigue, impact, blast, lightning, crashworthiness, composite applications in aerospace, automotive, transportation, civil structures, energy generation and storage, and repair technology.

978-1-60595-225-3, ©2015, CD-ROM in plastic jewel case, **\$229.50**

Online: eProceedings, **\$190.00** (individual articles for \$25.00 each)

Asphalt Paving Technology 2014

Volume 83, Journal of the Association of Asphalt Paving Technologists

Edited by: Eugene L. Skok

Features research presentations devoted to the chemistry, engineering, modeling and testing of asphalt materials and processing. Developments in the use of components like bio-oil are discussed, as are strategies for testing asphalt components for wear and durability at low and high temperatures.

978-1-60595-206-2, ©2015, 763 pages, 6x9, HC book/CD-ROM, **\$159.50**

Chemistry, Materials, and Properties of Surface Coatings

Traditional and Evolving Technologies

Güngör Gündüz

This professional reference presents the basic science, as well as formulation, synthesis and manufacturing technologies of paints, polymer and inorganic coatings. The book forms a comprehensive guide to the materials engineering of surface coatings, including binders and solvents, and addresses practical issues such as adhesion, shelf-life, durability, hardness, mechanical and other qualities. It explains anti-corrosive, conductive, self-cleaning, self-healing paints plus eco-friendly powder and UV technologies. Attention is given to metallic and non-metallic pigments and special purpose paints for marine, automotive, and aerospace applications.

978-1-60595-066-2, ©2015, 768 pages, HC book, **\$189.50**

ADVANCED MATERIALS

2015

Design, Manufacturing and Applications of Composites

*Proceedings of the Tenth Canada-Japan Workshop on Composites
August 19-21, 2014, Vancouver, BC, Canada*

Edited by: R. Vaziri, A. Nakai, B. Crawford, M. Hojjati, T. Kosaka and S. Hoa

This newest book in the series spans across all areas in composite design and manufacturing. Papers focused on fundamental research, engineering R & D and industrial applications with the intention of promoting the innovative use of knowledge in equal measure to its creation are presented.

978-1-60595-169-0, ©2015, 402 pages, 6x9, SC book, **\$175.00**

Engineering Fundamentals of Ring Spinning/Twisting, Over-end Unwinding and Two-for-One Twisting in Textile Processes

Engineering with Fibers Series

Subhash K. Batra and W. Barrie Fraser

Using basic physics and engineering principles, this technical book offers an integrated approach for theoretically modeling a number of critical processes in the production of yarns and their subsequent preparation to make costly downstream conversion processes in the textile industry more efficient. The models provide practical insight into the physics of the phenomena and explain hitherto unintelligible observations, including the encountered engineering limitations.

978-1-60595-172-0, ©2015, 188 pages, 6x9, HC book, **\$159.50**

Guide to Modeling Thermoplastic Composite Manufacturing Processes

Optimizing Process Variables and Tooling Design Using Finite Element Analysis

Abbas Milani and Corey Lynam

Explains methods for building comprehensive finite element-based models/programs for the purpose of optimizing process variables and predicting dimensional distortions during the manufacturing of thermoplastic matrix composite parts. Provides a step-by-step approach to predict the magnitude of distortion via easily available FE codes. The approach connects testing, material characterization, modeling, simulation and optimization and is illustrated in a multi-staged, rolled continuous thermoplastic woven fabric laminate, which can be readily applied to other materials and processes. The method reduces the need for costly and time-consuming re-tooling in parts design.

978-1-60595-042-6, ©2015, 100 pages, 6x9, SC book, **\$97.50**

Joining Composites via Adhesives

Theory and Applications

Edited by: Magd Abdel Wahab

A comprehensive technical introduction to the theory and practice of how adhesives are used to join different types of composite materials (including polymers, metals, concrete and wood), this contributed volume explains quantitative methods and testing for joint strength, as well as mechanics. The second part of the book focuses on adhesives as applied connecting and adhering composites in aerospace, aircraft, automotive, marine, civil engineering and biomedical applications.

978-1-60595-093-8, ©2015, 324 pages, 6x9, HC book, **\$184.50**

Metal Matrix Syntactic Foams

Processing, Microstructure, Properties and Applications

Edited by: Nikhil Gupta and Pradeep K. Rohatgi

Comprehensive technical treatment of the theory, mechanical engineering and applications of metal matrix syntactic foams. Part of the book covers processing and properties of metal foams based on the matrix metal. The second part compares syntactic foams of different materials based on density and strain rate. In addition, the text clarifies the design and application of syntactic foams in automotive and biomedical applications.

ADVANCED MATERIALS

2015

Response of Structures Under Extreme Loading

Fifth International Workshop on Performance, Protection & Strengthening of Structures under Extreme Loading, (PROTECT 2015), June 28-30, 2015

Edited by: Venkatesh Kodur and Nemkumar Banthia

This series volume presents research on the behavior of structures exposed to extreme conditions. The book investigates the performance of structures subject to shock, explosions, earthquakes and fire and presents methods for strengthening, repairing and retrofitting structures and offers detailed temperature, load and stress analysis of numerous engineered materials, including fiber-reinforced polymers and high-performance concrete. New information on protection design, structural health monitoring, sensors and fire-resistant materials is included.

978-1-60595-227-7, ©2015, 1,013 pages, 6x9, SC book, **\$229.50**

Structural Health Monitoring 2015

An Automated Solution to Global Structural Integrity Management

Proceedings of the Tenth International Workshop, September 1-3, 2015, Stanford University

Edited by: Fu-Kuo Chang

This important series is available as a beautiful bound edition and in Internet downloadable format for research and technology development providing information on improved Structural Health Monitoring (SHM), including actuators, multifunctional materials, networks and systems, signal processing, prognostics/CBM+, validation, certification and more. Special attention is given to SHM in aerospace, civil infrastructures, oil/gas energy sectors, medical applications, etc.

Print: 978-1-60595-275-8, ©2015, 3,220 pages, 6x9, 2 Vol/HC book, **\$309.50**

Online: eProceedings, **\$245.00** (individual articles for \$25.00 each)

Sustainable Composites

Fibers, Resins and Applications

Engineering with Fibers Series

Anil Netravalli and Christopher Pastore

Technical volume shows how the design and mechanics of composite materials are transferred to the development, testing and applications of materials fabricated in whole or in part from renewable resources. The book provides scientific details on how plant-based and recycled materials are incorporated as fibers, resins and additives into traditional and multifunctional composites. Explains testing, modeling and applications, particularly in architecture, civil engineering and transportation.

978-1-60595-111-9, ©2015, 560 pages, 6x9, HC book, **\$189.50**

2014

Aeronautical Applications of Non-destructive Testing

Abbas Fahr

Presents a detailed assessment of non-destructive testing methods for materials and parts in aircraft. Describes a wide variety of NDT techniques and explains their application in the evaluation and inspection of aerospace materials and components ranging from the entire airframe to systems and subsystems. Offers guidance on the information derived from each NDT method and its relation to aircraft design, repair, maintenance and overall safety. The book covers basic principles, as well as practical details of instrumentation, procedures and operational results with a full discussion of each method's capabilities and limitations as these pertain to aircraft inspection and different types of materials, e.g., composites and metal alloys. A final section is devoted to NDT reliability.

978-1-60595-120-1, ©2014, 510 pages, 6x9, SC book, **\$179.50**

ADVANCED MATERIALS

2014

American Society for Composites—Twenty-ninth Technical Conference

*held jointly with 16th US-Japan Conference on Composite Materials and ASTM-D30 Meeting
Proceedings, September 8-10, 2014, University of California San Diego, La Jolla, CA*

Edited by: Hyonny Kim

A fully searchable CD contains new and unpublished research on multifunctional, active, biobased, structural health and self-healing composites for aircraft, bridges, concrete, armor, and wind energy. Synthetic, biobased, and nano composites with multiple matrices are discussed, along with new ways to model and manufacture composites. Also covers: electrical properties, damage/failure, micromechanics, environmental effects and impact.

978-1-60595-124-9, ©2014, CD-ROM in plastic jewel case, **\$215.00**

BALLISTICS 2014

28th International Symposium, September 22-26, 2014, Atlanta, GA USA

Edited by: Richard G. Ames and R. Daniel Boeka

Presents research results and the application to the various fields of ballistics relating to theories and concepts to the design, development, and evaluation of weapon systems and their performance against materiel such as armor and other potential targets. The papers are presented by world-class ballisticians from over 24 countries.

978-1-60595-149-2, ©2014, 1,789 pages, 2 Vols. w/CD, 6x9, HC book, **\$299.50**

Fundamentals of Fiber Science

Xiangwu Zhang

This volume provides the basic chemical and mathematical theory needed to understand and modify the connections among the structure, formation and properties of many different types of manmade and natural fibers. At a fundamental level it explains how polymeric and non-polymeric fibers are organized, how such fibers are formed and how primary and secondary properties, from basic flow to thermal and electrical qualities are derived from molecular and sub-molecular organization, thus establishing the quantitative and predictive relationships needed for fiber engineering.

978-1-60595-119-5, ©2014, 429 pages, 6x9, HC book, **\$159.50**

Student price available

Introduction to Polymer Chemistry

A Biobased Approach

Judit Puskas

Designed for polymer and materials engineering students, the text introduces polymer chemistry through polymers found in nature. It explains biobased polymer systems and synthetic systems by exploring the chemistry of natural polymers from plants and animals, as well as self-assembled macromolecular structures, including proteins, lignin, protamers, and fibers. Also covered are synthetic polymerization and emerging advances in green polymer chemistry.

The Mechanics of Adhesives in Composite and Metal Joints

Finite Element Analysis with ANSYS

Magd Abdel Wahab

Introduces the mechanics and modeling of adhesive joints (lapped, cantilever beam, etc.) made from composites and metals. After reviewing basic mechanics applied to adhesive joining, the book demonstrates how the properties of such joints are determined using finite element analysis, specifically ANSYS. The book includes guidelines and original input files for modeling non-cracked, cracked and damaged joints, where stress, fatigue cracks, thermal and diffusion analyses must be carried out for more accurate design, lifetime prediction and repairs.

2014

Waterborne Coatings Symposium 2014

Proceedings of the Forty-First Annual International Waterborne, High-Solids, and Powder Coatings Symposium

Edited by: James W. Rawlins and Robson F. Storey

Continuing a series, the present volume comprises a selection of 31 original research papers from industry and academia on the chemistry and formulation of technical coatings, beginning with key-note discussions of the meaning of glass transition and POSS. The book offers guidance to performance improvements by chemical modification of additives, dispersants, and cross-linkers, as well as new approaches using nanomaterials, graphene, and polymer brush chemistry. Attention is given to VOC reduction, enhanced hiding capacity, weatherability, dispersion and more.

2013

American Society for Composites—Twenty-eighth Technical Conference

Proceedings, September 9–11, 2013, State College, Pennsylvania

Edited by: Charles Bakis

Articles cover the growth of knowledge gained from inter-disciplinary engineering and scientific research in composite materials, and discuss the unique properties of composite materials in emerging applications. Papers focus on recent research, development and applications of composite structures and materials.

An Introduction to Healthcare and Medical Textiles

Wen Zhong

A scientific introduction to the study, engineering and applications of medical textiles. Book moves systematically from the fundamentals of textile materials and their fabrication through biocompatibility and biodegradability to the applications of textiles in healthcare, ranging from hygiene to wound care, grafts, implantables and more. Provides analytical data on how the internal structures of various types of textiles, wovens, knits and nonwovens, are related to specific medical/biomedical end uses. The book aims to show the connection between textile properties and the design of medical and healthcare textile products.

Composite Materials in Piping Applications

Design, Analysis and Optimization of Subsea and Onshore Pipelines from FRP Materials

Dimitris G. Pavlou

A comprehensive book on the design, analysis, and performance of composite materials (CM) in oil, gas, water and wastewater pipe applications. Part one provides background on composite materials with a special emphasis on failure analysis, dynamic responses due to pulsed and sudden loading, as well as pressure vibration. The second part explains theoretical tools for assessing the design and lifetime performance of CM pipelines. The volume discusses pressure and temperature gradients during service, for the purpose of carrying out loading calculations. Optimization methods are presented for reducing pipeline costs, and a section is devoted to pre-service and in-service quality and maintenance. Includes a CD-ROM that contains original computer algorithms in the Mathematica platform based on equations in the book.

Design and Analysis of Structural Joints with Composite Materials

Rikard B. Heslehurst

Book presents a comprehensive set of design and analysis equations, as well as technical steps, to enable engineers and technicians to produce and test effective structural joints using composite materials and explains how composites joints differ from ones made of metal. Techniques provided apply to joining methods in aviation, aerospace, automotive, infrastructure and recreation. The book is enhanced with details on failure analysis and ways to improve composite joining systems, as well as special sections on troubleshooting drawn from field-based case studies.

Design, Manufacturing and Applications of Composites

Proceedings of the Ninth Joint Canada-Japan Workshop on Composites

July 30-August 1, 2012, Kyoto, Japan

Edited by: Hiroyuki Hamada, Yuqiu Yang and Suong Van Hoa

Discusses topics on composite structures and materials including: Polymer matrix composites, Metal matrix composites, Ceramic matrix composites and Concrete mix composites that cover design, manufacturing and evaluation. In addition, nano-scale materials/ structures and ecomaterials are included.

978-1-60595-116-4, ©2013, 319 pages, 6x9, SC book, **\$165.00**

Graphene in Composite Materials

Synthesis, Characterization and Applications

Nikhil Koratkar

Original monograph locates graphene within the carbon chemistry alternatives available to materials engineers and explains how it is incorporated into polymer-matrix, as well as ceramic- and metal-matrix composite materials. The book shows how various forms of graphene are synthesized and then added to polymer composites as main or hybrid nanofillers, with a focus on how graphene affects the electrical and mechanical properties of composites.

ADVANCED MATERIALS

2013

Metal Foams

Fundamentals and Applications

Edited by: Nihad Dukhan

The first full-scale technical treatment of an important class of engineered porous materials: metal foams. Written by a team of metal foam experts from around the world, the volume offers new, as well as fundamental, information on all aspects of metal foams, including their theory, manufacture, structure-property relationships and applications. The book explains microscopy and modeling tools that enhance the prediction and determination of metal foam properties related to fluid flow, heat transfer, sound absorption and failure analysis. Attention is given to the many techniques for manufacturing and testing metal foams and to how their microstructure can be controlled to create custom properties for applications in acoustics, bone implants, heat sinks, lightweighting and crash protection.

Nanocoatings: Principles and Practice

From Research to Production

Steven Abbott and Nigel Holmes

A practical guide for designing and making commercial coatings to which nanoparticles are added, this volume shows how to create and recognize a nanocoating formulation with the correct functional properties. Illustrates how to make and apply a coating so that it actually works as designed. Book connects formulation and fabrication in ways conducive to the manufacture of marketable nanocoated products. Nanoparticles discussed include: metal oxides, quantum dots, CNTs, graphene, nanoclays, photoconductors and more. Book is accompanied by downloadable working spreadsheets of design formulas and coatings data.

Asphalt Paving Technology 2012

Volume 81, Journal of the Association of Asphalt Paving Technologists

Edited by: Eugene L. Skok

Presents over 30 new, refereed and not previously published research reports on all areas of asphalt technology including mixing, mixture elements, and testing. Offers new solutions to production and scale-up problems in asphalt plants and original information on asphalt research in Latin America. Subjects investigated include: photocatalytic asphalt; cracking resistance; fracture properties; RAP aggregate; high polymer mixtures; longitudinal joints; asphalt concrete; and GB5 mix design.

978-1-60595-100-3, ©2012, 855 pages, 6x9, HC book/CD-ROM, **\$160.00**

Fatigue Behaviour of Fiber Reinforced Polymers

Experiments and Simulations

Edited by: Wei-Xing Yao, Jacques Renard and Norbert Himmel

Book is organized around new experiments in and modeling of fatigue and its effects over a range of composite materials subjected to multiple mechanical and thermal stresses. An objective of the investigations discussed is to explain failure mechanisms and improve long-term loading prediction and performance. Chapters in the book are edited and refereed presentations made at the most recent ICFC5 conference, held in Nanjing, China.

Introduction to Nonwovens Technology

Engineering with Fibers Series

Subhash Batra and Behnam Pourdeyhi

Provides a systematic step-by-step explanation of virtually all processes that integrate relevant raw materials into finished nonwovens for different end uses. The book explains the connection between the structure of nonwovens and the specialized, as well as still evolving, technologies used to produce them—from simple roll goods to nanoscale webs and fiberwebs. The unified treatment in the book is meant to serve the needs of engineering and technology professionals. For students and instructors, the text also offers reviews of basic chemistry, polymer physics and heat transfer concepts, which are linked to processing and design information. Problems and exercises are presented for classroom study and individual practice.

Nanomaterials in Concrete

Advances in Protection, Repair, and Upgrade

Henry E. Cardenas

The book presents original work on how nanomaterials are applied to concrete through electromutagenic processes, which modify the microstructure of concrete materials in situ without changing their dimensions or appearance. The first section focuses on nanoconstruction methods as defined by nanomaterial reactions, chemical assembly strategies, specific phase formations and electric field configurations. The book then presents applications of nanomaterials processing, including porosity reduction, strength enhancement and durability. A section on electromutagenics builds on the previous concepts to introduce opportunities for radical changes to concrete microstructures and the macroproperties that depend upon them. The final section offers engineering details on set-up, mix materials, execution, and validation.

Nanoscience and Nanomaterials

Synthesis, Manufacturing and Industry Impacts

Wei-Hong Zhong, Bin Li, Russell G. Maguire, Vivian T. Dang, Jo Anne Shatkin,

Gwen M. Gross and Michael C. Richey

A comprehensive account of how nanomaterials are synthesized and processed, this book presents the theory and technologies of producing nano-based materials, particularly nanocomposites, for various applications. The book moves from a technical review of how nanomaterials are synthesized in small batches to a consideration of the practical problems faced by industry when nano-based materials are introduced into product manufacturing.

Nanotechnologies for Solubilization and Delivery in Foods, Cosmetics and Pharmaceuticals

Edited by: Nissim Garti and Idit Amar-Yuli

Demonstrates how vehicles for delivering bioactive ingredients through a variety of oral, transdermal, buccal and mucosal routes, can be synthesized by nanolevel manipulation of colloidal systems, proteins, peptides, liquid crystalline phases, organogels and dendrimers. Special attention is given to the modification of mesophases in micellar and liquid crystal systems, which are shown to be productive templates and chemical nanoreactors for uniquely structured nanocarriers. The information presented in this book is applicable to the design of micro- and nanolevel delivery systems with improved targeting, more efficient controlled release, and superior in vivo penetration into dermal and cellular structures.

Plants and Mechanical Motion

A Synthetic Approach to Nastic Materials and Structures

Edited by: Norman Wereley and Janet M. Sater

Beginning with the basics of plant motion, this book explains technologies for translating plant-like movements to new adaptive materials, with explicit reference to helicopter and aeronautic applications. Part one focuses on energy transport strategies using transport protein pressurization, ion intercalation, electroosmosis/electromigration and closed-cell gas generation. Part two concentrates on the mechanics and applications of fluidic muscle-like materials modeled on fibrillar plant tissue in manipulatable arms, soft robotics, and morphing aeronautical structures, specifically helicopters. Each chapter covers analytical models, test results, design and troubleshooting.

Recent Advances in Textile Composites (TexComp 9)

9th International Conference on Textile Composites, October 13-15, 2008

Edited by: Suresh G. Advani and John W. Gillespie, Jr.

This volume presents key research in textile composites. Information is presented on manufacturing efficiencies, performance, and testing of two-dimensional and three-dimensional composites.

2007

Introduction to Nanocomposite Materials

Properties, Processing, Characterization

Thomas Twardowski

This textbook is a step-by-step introduction to nanocomposite materials using methods familiar to materials science students and engineers. It covers all nanoparticle types, including flakes, nanotubes, and nanoparticulates. It provides the basics for composites with reinforcements ranging from microns to nanometers.

Special Programs and Services in Schools

Creating Options, Meeting Needs

Revised, 2nd Edition

Bonnie Beyer and Eileen S. Johnson

This is an updated and revised version of the original (2005) volume that organized and explained virtually all federally mandated programs administered in public education in the United States. It explains the goals and requirements of dozens of programs and clarifies government regulations affecting students as well as citizens who come in contact with schools, e.g., disabled individuals, job-seekers, employees, non-English-speaking parents and many other groups. The detailed information in this book is needed for understanding government mandates, accessing the right agencies, reducing discrimination, and avoiding legal entanglements. The book is used extensively in university courses for school administration.

2013

Costs of Education

Revenue and Spending in Public, Private and Charter Schools

Betty Cox, Spencer Weiler and Luke Cornelius

Based on extensive research and actual school budgets, this volume is a systematic exposition of how money is collected and spent in the thousands of U.S. public school districts, as well as in parochial, private and charter schools. The book explains the decisions and paper trail of how funds are allocated in planning, justified in outlays, and accounted for, especially with regard to educational goals.

2009

Catholic School Administration*Theory, Practice, Leadership**2nd Edition, Revised and Expanded*

Robert H. Palestini

This new edition of the highly influential text, Catholic School Administration, has been greatly enlarged and improved with new chapters on curriculum improvement, supervision of instruction, ways to assess testing—as well as new information on marketing, human resources, and student recruitment. Based on principles drawn from Ignatius to Vatican II, as well as concepts from current educational and social theorists, the book combines the best ideas for leading and decision-making with detailed practical presentations of the managerial tasks that must be mastered to run a parochial school. Case studies and surveys provide extra guidance. For readers seeking to make organizational and instructional improvements, this text offers proven techniques for systematic change. It is an outstanding resource for introducing administrators to the challenges of running a Catholic school.

ENVIRONMENTAL TECHNOLOGY

2017

Odor Production in Wastewater Treatment *Prevention and Control*

Michael Gerardi

A comprehensive guide to the causes and control of odors in wastewater plants, lagoons, and biosolids (sludge) handling facilities, the book spells out the chemical and microbiological conditions in wastewater unit operations that produce foul smells and potential health hazards for workers. The book provides information on how to monitor odors and then explains techniques for preventing odors before they occur. Essential information is given on chemical, filtering and scrubbing methods for controlling mephitic compounds. The book also offers management strategies for addressing public complaints about odors associated with wastewater treatment.

The Science of Wastewater

Frank R. Spellman

The scientific properties of wastewater and the unit processes used to transform it into effluent of sufficient quality to be discharged into the environment are explained in this reference, which presents step-by-step descriptions of, and mathematical tools for, wastewater treatment from filtering and activated sludge to detention basins, ponds and lagoons to the stabilization and composting of biosolids. Chapters cover the math, hydraulics, chemistry, electrical conductivity of wastewater and its constituents, as well as methods and calculations used in sedimentation, biological contractors, chemical dosing, lab analysis and more, with hundreds of operations-based problems and solutions.

978-1-60595-250-5, ©2016, 528 pages, 6x9, HC book, **\$129.50**

Wastewater Bioaugmentation and Biostimulation

Michael Gerardi

A guide to understanding and enhancing existing microbial populations in biological wastewater treatment for municipal and industrial waste streams, the book addresses operational problems arising from deficiencies in biomass and presents ways wastewater processes can be improved. The text explains the groups of microbes used in bioaugmentation and the nutrients, enzymes and growth factors needed to solve processing problems and achieve operational goals, e.g., the conversion of starches such as cellulose. The text also reviews the degradation of substrates and the roles performed by specific microbes.

2015

Life Cycle Analysis of Nanoparticles *Risk, Assessment and Sustainability*

Edited by: Ashok Vaseashta

This book discusses how lifecycle assessment (LCA) concepts are applied to analyze the fate of nanoparticles and nanomaterials in a variety of environmental and manufacturing settings. Starting by locating LCA and LCA modeling in the context of overall risk assessment, the text presents sensor methods to detect and monitor nanoparticles and to characterize their risks. Subsequent chapters focus on the potential for the design of sustainable nanomaterials. Chapter topics include: risk mitigation in water, toxicology, biosensors, and membranes.

Activated Sludge Technologies for Treating Industrial Wastewaters *Design and Troubleshooting*

Joseph G. Cleary and W. Wesley Eckenfelder

A comprehensive presentation of activated sludge from basic principles to new process designs and configurations, the book explains how activated sludge is utilized to bring industrial wastewaters up to effluent permit standards, with special attention to organics, microconstituents and bioactive pharmaceuticals. Covers characterization, pretreatment; treatability studies; process modeling and reuse from pharma, food, beverage, and meat packing facilities. A chapter is devoted to treatment of shale gas/fracking wastes. Key information for retrofitting, troubleshooting and new design.

Methods for Developing New Food Products

An Instructional Guide

Expanded Second Edition

Fadi Aramouni, Kathryn Deschenes

The book explains the steps to develop a new, safe and legally permitted food product from original idea to the marketed item. Important for any food specialist planning to introduce a new food item, this volume explains organizational, technical, legal and cost factors that must be taken into account before a new food can be produced and sold. The second edition has been updated in terms of the Food Safety Modernization Act and adds a chapter on pet food. New for this edition are sections on innovation software, emerging food pathogens, a Food Safety Plan, FDA information on labeling and additives, as well as Certificates of Analysis and Letters of Guarantee.

Molecular Methods for Detection and Characterization of Food and Environmental Pathogens

Suresh Pillai

Textbook explains the principles and applications of molecular/genetic techniques that are widely used in food, environmental, public health and safety and other fields to identify dangerous microbes. After a basic introduction to detection methods, the book's chapters clarify the fundamental concepts underlying current molecular methods. Each method is elaborated step-by-step using examples and cases intended to help select the appropriate molecular method for sampling, identifying and tracing specific pathogens. All methods discussed are accompanied by detailed lab protocols that demonstrate how specific techniques and equipment (e.g., PCR, lab-on-a-chip etc.) are applied in realistic situations. The book also presents quantitative risk assessment and its connection to molecular methods.

The ICC Handbook of Cereals, Flour, Dough & Product Testing

Second, Revised Edition

Edited by: Stanley P. Cauvain

An updated and expanded version of the industry-standard handbook developed with the International Association for Cereal Science and Technology (ICC), this enlarged reference explains technical standards and test methods applied through the grain chain for many types of cereals and the products made from them, e.g., baked goods and animal feeds. The new edition adds and explains novel tests, testing data, international requirements, operational procedures and equipment that have come into use since the first edition was published in 2009. Techniques in this book pertain to cereal chemistry, analysis, quality control and safety.

FOOD SCIENCE

2017

The Use of Nanomaterials in Food Contact Materials

Design, Application, Safety

Rob Veraart

Analyzes the uses and risks of nanomaterials in food preparation, on surfaces, and within packaging. The book explains how nanomaterials are applied in many phases of food production, including packaging materials, inks, coatings and nano-silver antimicrobials. Shows how nanoparticles are monitored and characterized. In this context, the book reviews the evidence for migration of nanoparticles and assesses risks of exposure. A primary feature of this text is the presentation of national laws and standards from Europe, Asia, South and North America that regulate the use of food-related nanomaterials.

Functional Foods, Nutraceuticals and Natural Products

Concepts and Applications

Edited by: Raj Vatterm and Vatsala Maitin

Volume examines the evolution and analysis of functional foods in the prevention and therapeutic management of chronic and infectious human pathologies. It discusses the sources and constitutive active ingredients and expands the current understanding of the metabolic, physiological and genomic effects of functional food ingredients. It provides insights into relevance of functional foods in complementing pharmaceutical and other strategies for human health and wellness and explores the translation of scientific breakthroughs into commercial functional food products.

Peanuts: Bioactives & Allergens

Edited by: N. Alice Lee, Rao Rachaputi and Graeme Wright

With the peanut representing an ever-increasing component of the global diet, the current book presents a scientific analysis of the two main and dichotomous properties of peanuts: allergenicity and health. The volume provides a technical explanation of the bioactive nutrients and dietary benefits of the peanut. It also reviews and analyzes the evidence implicating peanuts as a major food allergen. Moving beyond science to technology and engineering, the book demonstrates how genetic, pre-harvest, post-harvest and processing technologies are deployed that can increase the nutraceutical value of peanuts and mitigate their risks.

978-1-60595-036-5, ©2016, 382 pages, 6x9, HC book, **\$148.50**

The Human Microbiome Handbook

Edited by: Jason Tetro and Emma Allen-Vercoe

Written by a team of leading scientists, this text is designed as a technical introduction to microbiome research and its ramifications for human health and medicine. The first section focuses on the microbiome in general and its ecology, with contributions from pioneers in the field such as Sydney Finegold. Part two concentrates on the interactions between microbial populations and physiology, metabolism and immunology. The final section of the book is devoted to investigating the effects of the microbiome on chronic and autoimmune diseases. Genetics and the microbiome are discussed, as are clinical therapies for modifying the microbiome.

Methods for Developing New Food Products

An Instructional Guide

Fadi Aramouni and Kathryn Deschenes

This volume is a practical textbook for students and professionals who need to know the basics of how new food products are planned, developed, and launched. Step-by-step, the book explains the techniques needed to design and test-market safe and profitable food items. Determining how new product decisions are analyzed and which economic/cost factors must be weighted and investigated is reinforced by case studies of actual products launched by U.S. food companies.

Post-Harvest Technologies of Fruits and Vegetables

Hosahalli S. Ramaswamy

A comprehensive introduction to traditional and emerging areas of post-harvest technology, this text investigates factors that cause deterioration in the post-harvest quality and enhance shelf-life of perishable produce. The book explains all major post-harvest storage and handling technologies for fruits and vegetables in their fresh state, and also covers MAP packaging. Psychrometric principles and their role in post-harvest storage are examined to understand moisture transfer phenomena in produce storage. Volume includes calculations for process control and shelf-life prediction.

Functionalizing Carbohydrates for Food Applications

Texturizing and Bioactive/Flavor Delivery Systems

Edited by: Milda E. Embuscado

This book systematically explains the chemistry and engineering of new starch-based polymers and carbohydrates and shows how they improve the texture of foods and act as carriers for flavors and for bioactive compounds. Also investigates current and potential uses of functionalized carbohydrates in formulating and processing improved and healthier foods.

Minerals in Food: Nutrition, Metabolism, Bioactivity

Edward Harris

Book presents a technical introduction to all facets of nutritive minerals in foods, including their chemistry, transport, absorption, bioavailability and physiological functions. The book explains the in vivo behavior of minerals at a molecular level and clarifies their unique metabolic roles. Important instructional text for students and practitioners of nutrition and food science.

Food Authentication Using Bioorganic Molecules

Edited by: Stefano Sforza

Describes molecular-level techniques for identifying and measuring quality-defining properties of meats, fish, cheeses, wine, cereal products and more. Book offers practical guidance on DNA, peptide, lipid and other methods for certifying genuineness of sources and ingredients and preventing food counterfeiting.

Microbiology of Thermally Preserved Foods

Canning and Novel Physical Methods

Tibor Deak and József Farkas

While introducing the principles and processes of industrial-level food canning, the volume focuses on the effects of microorganisms, their ecology, fate, and prevention through all phases of canning and other thermal processing techniques, such as aseptic packaging. It covers microbial spoilage and detection for vegetables, fruits, milk, meat and seafood from the raw food materials through individual unit operations, facility sanitation, and packaging. It thus offers a practical introduction to understanding, preventing and destroying microbe-based hazards in food plants that use thermal processes. The text surveys major spoilage and pathogenic microbes of interest, explaining their toxicity, product and safety effects, and the conditions of their destruction by heat treatment.

Tharp and Young on Ice Cream

An Encyclopedic Guide to Ice Cream Science and Technology

Bruce Tharp and Steve Young

This volume is a comprehensive and practical guide to the formulation, manufacturing and quality enhancement of ice cream and related frozen desserts such as sherbets, gelato, sorbets, and frozen yogurts. Organized alphabetically by topic, and with many technical tables, the book explains all aspects of ice cream processing and equipment, from raw materials to packaging. Specifically the book offers a comprehensive account of the freezing process and demonstrates how it affects the chemistry of, and ice formation inside, frozen dairy products.

2012

Military Food Engineering and Ration Technology

Edited by: Ann Barrett and Armand Cardello

Written by a team from the U.S. Army's Combat Feeding Directorate at the Natick Research, Development and Engineering Center, this volume represents a comprehensive guide to how the military designs, processes, customizes, packages and distributes highly palatable, long shelf-life food products for field personnel. The book offers new data on numerous technologies used to solve problems such as nutrient densification, lightweighting, novel thermal processing, and longterm quality preservation in delivering appetizing foods and more.

Nanotechnologies for Solubilization and Delivery in Foods, Cosmetics and Pharmaceuticals

Edited by: Nissim Garti and Idit Amar-Yuli

Demonstrates how vehicles for delivering bioactive ingredients through a variety of oral, transdermal, buccal and mucosal routes, can be synthesized by nanolevel manipulation of colloidal systems, proteins, peptides, liquid crystalline phases, organogels and dendrimers. The information presented in this book is applicable to the design of micro- and nanolevel delivery systems with improved targeting, more efficient controlled release, and superior in vivo penetration into dermal and cellular structures.

Omics, Microbial Modeling and Technologies for Foodborne Pathogens

Edited by: Xianghe Yan, Vijay K. Juneja, Pina M. Fratamico and James L. Smith

This book provides comprehensive information on genetic analysis and multiple omics methods, microbial modeling, and other technologies used for the analysis of a wide variety of foodborne pathogens. Part I details the use of genomics, proteomics, metabolomics etc. to study and classify foodborne bacteria, viruses, fungi and protozoa. Part II covers microbial growth, modeling, and risk assessment and how these contribute to improving food safety. Part III provides guidance on creating a new food safety database infrastructure.

Food, Nutrition and the Nitric Oxide Pathway

Edited by: Nathan S. Bryan

This volume is the first to analyze the effects of food and nutrients on changes in the nitric oxide pathway. The authors present and explain novel pathways linking nitric oxide and nutrient intake. The book explains the role of foods and dietary elements for restoring nitric oxide production and homeostasis in NO-deficient subjects—without medical interventions. Intended for food, nutrition and pharma scientists, as well as medical researchers investigating the role of nitric oxide in human health.

MACHINERY /MFR. ENGINEERING

2010

Precision Spindle Metrology, 2nd Edition

Eric Marsh

New techniques and data have been added to this book to increase its size by over 20 percent. The goal of the book is to provide concepts and measurement techniques for analysis of precision spindle performance. The volume shows how to use and measure spindles to improve manufacturing and inspection processes. One of the main emphases is on sustaining rotational quality. The book will benefit engineers, quality control personnel, and precision machine specialists.

The Mechanics of Rollers

David R. Roisum

The book is a comprehensive technical guide to rollers, the key component of winding devices and processes. With hundreds of illustrations and mathematical formulas, the book explains all facets of rollers. Specialty rolls and maintenance are also explained.

0-89852-313-3, 2010 Reprint (©1996), 317 pages, 7x10, SC book, **\$135.00**

The Mechanics of Winding

David R. Roisum

This classic book focuses on the actual ways (mechanics) of winding a good roll, in contrast to discussing winding equipment. In detail and with many useful formulas, the text explains what winding is and how it works. It shows how the numerous processes of winding can be used on different machines and for multiple rolled materials, including paper, film, foil and nonwovens. Engineering know-how is provided to select specifications and link them to machinery.

0-89852-281-1, 2010 Reprint (©1994), 238 pages, 7x10, SC book, **\$149.00**

Web Machine Buying Guide

Designing For, Installing and Maintaining Web Equipment

David R. Roisum

Provides a step-by-step technical approach to acquiring machines designed to process large rolls of plastic film, paper, foils and other materials. Written by one of the leading authorities in the world, the book offers analysis for engineers and managers in the packaging, converting, paper, and plastics industry.

978-1-60595-011-2, ©2010, 274 pages, 6x9, flexible SC book, **\$149.50**

2008

Winding: Machines, Mechanics and Measurements

James K. Good and David R. Roisum

This recent book, by two of the world's foremost experts, is the definitive guide to how winding machines work and how wound rolls are formed. It covers a wide array of machines in use across all web industries, including paper, film, foil, nonwovens, textiles, and more. It sets the standard for understanding and applying quality control in the field.

Accompanying CD-ROM provides computer models for many winding situations

The Case Manager's Survival Guide*Winning Strategies in the New Healthcare Environment, 3rd Edition*

Toni Cesta and Hussein Tahan

The 3rd edition of this highly successful and widely used book provides vital information case managers and administrators of case management programs need to be successful. This new edition incorporates the impact of the Patient Protection and Affordable Care Act, Value-Based Purchasing measures, case management practices across the continuum, care coordination, transitional planning, and case management software and other technology applications. A useful resource for working in the changing healthcare environment, it addresses case managers in all settings and from diverse professional backgrounds. This edition places special emphasis on nurse case managers and their role in providing case management services, coordinating resources, cost containment, and optimizing the patient experience. Focusing on the practical aspects of case management, it discusses the operations of case management programs based on the authors' first hand experiences.

Genomic Essentials for Graduate Level Nurses

Edited by: Diane Seibert, Quannetta Edwards, Ann Maradiegue and Susan Tinley

Designed as both a nursing reference and course text, this book presents genetics and genomic essentials specifically for graduate-level nurses. Preliminary chapters cover the basics of genetics, risk assessment and genetic testing. With chapter contributions by topic experts, the remainder of the book is organized by disease system and covers genetics and genomics in prenatal care, neurology, cancer, respiratory function, cardiology, pharmacogenomics, hematology and others. Key chapters on ethical and legal issues and future technology are also included.

Nursing Leadership and Management

The Advanced Practice Role

Edited by: Denise M. Korniewicz

This textbook is intended for students preparing as advanced practice nurses, doctoral physical therapists, doctoral pharmacists, and other advanced practice professionals. The book provides a practical approach to the application of leadership and management principles while systematically presenting the content needed for skilled leadership specific to clinical settings. A case study is incorporated into the theoretical material of each chapter as a continuing illustration. Key themes such as quality and safe patient care, transforming clinical practice, and critical thinking principles to improve patient outcomes form key chapters of the book.

2014

Healthcare Finance and Financial Management

Essentials for Advanced Practice Nurses and Interdisciplinary Care Teams

Mary Paterson

This textbook is intended for students preparing as advanced practice clinicians. It is organized in two main parts. The first focuses on macro issues in healthcare finance and policy issues, and the second concentrates on healthcare financing management in professional practice. Each section features a case study to facilitate classroom discussion. This book is suitable for healthcare finance courses in the curriculum for MSN and DNP programs and also for schools of social work, medicine, occupational, and physical therapy.

Infection Control for Advanced Practice Professionals

Edited by: Denise M. Korniewicz

Professional reference combines research on the best practices for infection control in clinical settings with essential information for advanced practice nurses. The book is organized by healthcare settings, and the coverage ranges from small practice offices to large hospitals and medical institutions. A case study is incorporated into the theoretical material of each chapter as a continuing illustration. Nurse practitioners, physical therapists, physician assistants, and students are the intended audience.

2013

Ethical and Legal Issues for Doctoral Nursing Students

A Textbook for Students and Reference for Nurse Leaders

Edited by: Anne Griswold Peirce and Jennifer A. Smith

Designed for ethics courses in nursing Ph.D. and DNP programs, the book fills the need for an expanded view of required ethics content in the nursing curriculum. Coverage of ethical patient care, care in vulnerable populations, legal influences on ethical care, ethical business practices, and research ethics are discussed and analyzed by experts. Case studies provide real-world examples and facilitate classroom discussion.

OTHER TECHNOLOGIES

GEOSCIENCE

Great Basin Evolution and Metallogeny—2015

Geological Society of Nevada Symposium, May 14-23, 2015

Edited by: William M. Pennell and Larry J. Garside

This two-volume set of peer-reviewed papers, shown in full color, focuses on the geological analysis of ore-rich deposits in the western United States, especially those containing gold, silver, cobalt, molybdenum and other high-value metals. A range of stratigraphic, lithographic, remote-sensing models and core sample analyses are presented, particularly of areas likely to host Carlin-type gold deposits. Original research is provided on geochemical analysis, exploration and mining technologies. The volumes contain critical data, maps and discoveries for geology and mining engineering.

978-1-60595-226-0, ©2015, 1,388 pages, 2 Vols./CD, 8.5x11, HC book, **\$340.00**

Great Basin Evolution and Metallogeny—2010

Geological Society of Nevada Symposium

Edited by: Roger Steininger and William Pennell

Comprises 62 refereed research papers, shown in full color, from a symposium devoted to scientific investigations of geology, ores and metal exploration. Topics include mineral formation, geophysics, lithogeochemistry, stratigraphy, tectonics, and geothermal energy as related to metals and mining in the western United States and South America. Metals discussed are gold, arsenic, silver, tungsten, and copper as located in numerous hydrothermal and geothermal mineral formations.

PACKAGING TECHNOLOGY

2017

Handbook of Packaging Processes

Design and Decision-Making

Edited by: Roland Ten Klooster

An expanded version of a technical manual first published in the Dutch language, this volume presents the specialized rubrics needed to design all types of packages. The book concentrates on the material, technical and financial decisions that managers, engineers, and designers must make as a project moves from the idea stage to manufacturing and consumption. The book thus forms a guide to how packaging is designed and developed. Critical stages are: models, materials selection, printing, adhesion, lamination, manufacturing operations and lines, testing, sustainability and LCA, regulations, and costs.

978-1-60595-070-9, December 2017, 300 pages, 6x9, HC book, **\$119.50**

Packaging and Distribution of Fresh Fruits and Vegetables

Vanee Chonhenchob, S. Paul Singh and Jay Singh

A comprehensive explanation of technologies used to package fresh fruits and vegetables throughout the supply chain, i.e., from field to point of purchase, the book shows the connections among post-harvest treatment, packaging materials and systems, cold chain, transportation, storage, and merchandising. It presents and explains currently used as well as experimental packaging strategies, including edible coatings. It thus goes beyond lab-based science to clarify in technical detail how a wide variety of commercial produce, such as strawberries, apples, stonefruits, bananas etc. are processed and packaged to reduce bruising, spoilage and microbial contamination.

978-1-60595-327-4, ©2017, 264 pages, 6x9, HC book, **\$158.50**

2016

Bioactives in Food Packaging

Strategies, Quality, Safety

Edited by: Michael Kontominas

Edited monograph explains the chemistry and effects of natural active ingredients incorporated into food packaging materials to prevent, suppress or kill microbes. Among the bioactive agents discussed are: scavengers, enzymes, peptides, polysaccharides, plant extracts, essential oils and more. Contributors explain impregnating these substances into packaging materials and their synergy in microbe suppression and quality control for muscle, dairy and cereal foods, including efficacy over time and shelf-life. The book presents and analyzes methods and research on how bioactives interact with packaged foods and the extent to which such interactions are or are not correlated with changes in the properties of packaged foods and levels of microbial population/ecology relevant to food safety. How bioactives affect practical packaging decisions, such as scale-up, fabrication and labeling, is also discussed, as are the ramifications of bioactives for food handling and regulations.

PACKAGING TECHNOLOGY

2015

Cartons, Crates & Corrugated Board

Handbook of Paper and Wood Packaging Technology, Second Edition

Diana Twede, Susan E.M. Selke, Donatien-Pascal Kamdem and David Shires

Revised and expanded edition of a volume that is now the standard professional reference and academic text for the technology of wood, paper and paperboard packaging. The new edition offers key technical, regulatory and marketing developments from the past decade, including barrier packaging, food contact and migration, folding carton design and the dynamics of corrugated paperboard in the distribution network. With addition of two more authors, the work has been updated with information on European and global tests and testing standards, as well as emerging product opportunities and sustainable paper and board packaging initiatives. New sample problems have improved the book as a resource for university and corporate instructors.

Packaging and Transportation Forensics

Reducing Risk and Liability

S. Paul Singh and Jay Singh

This technical book outlines the laws and liabilities associated with producing, labeling and shipping packages. Special sections cover the regulations and risks of transport via truck, rail, ship and aircraft. Case law and court decisions illustrate strategies to lower the risk of accidents and lawsuits connected with all phases of packaging, including disposal. Covers personal injury, intellectual property, labels, cargo loading, regulations (including CFR 49, FMCSR, CVSA, and hazardous materials), tamper-evidence, accessibility, environmental impacts and more.

978-1-60595-164-5, ©2015, 364 pages, 6x9, HC book, **\$149.50**

2013

Creating Value Through Packaging

Unlocking a New Business and Management Strategy

James Peters, Brian Higgins and Michael Richmond

A methodical guide to managing packaging, which demonstrates how packaging, considered in a total context, can benefit all phases of a business and its customers. It offers a holistic business strategy that proves packaging's value-adding roles in creating successful products and enhancing the experience of customers—B2B as well as consumers. In addition, the text explains all the standard operating procedures of packaging development, along with numerous flow charts, formulas and graphics, covering cost-benefit analyses, planning, and sales.

PACKAGING TECHNOLOGY

2012

18th IAPRI World Packaging Conference

Proceedings

Edited by: Jay Singh

This volume comprises 94 original technical presentations delivered at the World Packaging Conference, sponsored by the International Association of Packaging Research Institutes (IAPRI) and held in June 2012 at California Polytechnic State University. The presentations are research papers that have not been published, as well as detailed (3-5-page) posters. The presentations' subjects cover eight areas: active/intelligent packaging, distribution packaging, medical, cosmetic and pharmaceutical packaging, food and agricultural packaging, hazardous materials containers, as well as sections on materials, sustainable, testing and standards. The book is the latest in a series from this important global packaging meeting, which brings together packaging researchers from universities and industry.

2011

Protective Packaging for Distribution

Design and Development

Daniel Goodwin and Dennis Young

Starting with a section on foundational (dynamic) theory, the book defines the hazards of distribution packaging, including the best practices for measurement of environmental stresses. This book seeks to understand the packaged product within a variety of systems and contains information for designing protective packaging.

978-1-60595-001-3, ©2011, 269 pages, 6x9, HC book, **\$169.50**

2010

The Packaging Value Chain

Claire Sand

Intended for packaging engineers and technologists, the text explains how all aspects of packaging are used to increase value throughout the packaging supply chain from raw materials, to suppliers and converters, to manufacturers and retailers to the post-consumer stage of a package. The book offers a comprehensive understanding of relationship management, informational flows and knowledge management, economics, and negotiations at every step of the packaging value chain.

2009

Fundamentals of Packaging Technology, Fourth Edition

Walter Soroka

This recent edition delivers a clear, concise guide to the expertise that forms the field's foundation. The author has a unique position in packaging with both wide experience and a practical way of communicating to readers. It is easy to understand and has detailed content. The book is used as a text in many university-level courses and in continuing education seminars.

PACKAGING TECHNOLOGY

2009

Heat Sealing Technology and Engineering for Packaging *Principles and Applications*

Kazuo Hishinuma

In this one volume all aspects of heat sealing are presented, including heating methods, melting, temperature monitoring, peel seals, tear seals and compo-seals. The book explains heat sealing machinery and processes and demonstrates methods for measuring and quantifying proper heat sealing temperatures leading to safer and more effective seal performance. Practical information is given on HACCP, testing, and troubleshooting defects, such as pinholes and polyball.

978-1-932078-85-5, ©2009, 267 pages, 6x9, SC book, **\$179.50**

Student price available

2008

Illustrated Glossary of Packaging Terminology, Second Edition

Walter Soroka

The book concentrates on the material components of packaging, ranging from wood and metal to the latest plastics. This edition presents many illustrated descriptions of the machinery and processes whereby packaging materials are formed.

978-1-930268-27-2, ©2008, 272 pages, 8.5x11, SC book, **\$124.50**

2007

Mass Transport & Reactive Barriers in Packaging *Theory, Applications & Design*

Anatoliy Y. Goldman and Stanislav E. Solovyov

This book is a systematic and comprehensive presentation of the theory and practice of polymer barrier films. Starting from a presentation of how gases and liquid solutes permeate films, the book explains the performance limits of polymer barriers under multiple packaging conditions. This information is then used to illustrate how engineers can predict properties and performance for single and multilayer barriers for a wide variety of packaging applications.

2005

Cartons, Crates and Corrugated Board *Handbook of Paper and Wood Packaging Technology*

Diana Twede and Susan E.M. Selke

This book describes the properties, manufacturing processes, function, and design of wood, paper, paperboard and corrugated fiberboard as packaging materials. Its complete and illustrated section on the history of packaging is enlightening and useful for understanding the reasons behind many of the names and traditional uses of wood- and paper-based packaging.

978-1-932078-42-8, ©2005, 526 pages, 6x9, HC book, **\$129.50**

PAPER MAKING TECHNOLOGY

2010

Paper Machine Quality Control Systems (QCS), Volume 1 *Measurement Systems and Product Variability*

K. Figiel, J. Gill, R. MacHattie, S. Nuyan, S. Sturm and J. Tippet

Important book introduces engineers to the many sensors and scanners used for quality control in the paper industry. Book focuses especially on QCS devices introduced in the last 10 years and provides an overview of sensor operation and set up, calibration, paper/roll qualities measured, as well as the underlying software.

978-1-59510-192-1, ©2010 TAPPI, 115 pages, 8.5x10.75, SC book, **\$219.50**

2008

Micro and Nanoparticles in Papermaking

Edited by: Jose M. Rodriguez

This volume explains the roles and performance of microparticles in the manufacturing and processing of paper and paper products. It covers key topics such as drainage and retention; cationic microparticles; colloidal silica; organic microparticles; hectorite systems; dual-polymer retention; clay minerals; and electron microscopy.

1-59510-074-1, ©2005, reprinted 2008, 206 pages, 8.5x11, SC book, **\$289.50**

Colloid Chemistry of Papermaking Materials

John W. Swanson and Gerard J.F. Ring

Based on the notes of the well-respected paper chemist, Dr. John Swanson of the University of Wisconsin, this classic book covers papermaking essentials: surface chemistry, colloidal chemistry, sorption, electrokinetic properties, flocculation, internal sizing agents, polymeric additives, and pitch and foam control agents.

1-9306657-87-0, ©2003, reprinted 2008, 284 pages, SC book, **\$169.50**

Principles of Wet End Chemistry, 2nd Edition

William E. Scott

A practical introduction to wet end chemistry as it applies to paper production, this book shows how chemical principles can improve paper processing and quality. It explains the chemistry and structure of fibers/fiber fines, colloids, colors, additives, fillers, and aluminum.

0-89852-286-2, ©1996, reprinted 2008, 186 pages, SC book, **\$129.50**

Extrusion Coating Manual, 4th Edition

Edited by: Thomas Bezigian

This latest edition is a comprehensive guide to extrusion coating processes for paper and packaging. It explains machinery, raw materials, and processing and contains extensive information on resins, screw/die design, polymer melts, and co-extrusion, as well as functionalized polymers and converting for cast film and lamination.

0-89852-067-3, ©1999, reprinted 2008, 312 pages, SC book, **\$189.50**

Properties of Paper: An Introduction, Second Edition, Revised

William E. Scott and James C. Abbott in collaboration with Stanley Trosset

Provides a step-by-step guide to the technical characteristics of paper: what they are, how they are related to processing, and how they are tested. The book analyzes paper properties with regards to converting and to their end uses. Throughout, an emphasis is placed on how the properties are influenced by raw materials and manufacturing.

0-89852-062-2, ©1995, reprinted 2008, 219 pages, SC book, **\$69.50**

PLASTICS/POLYMERS

2016

Shape-Memory Polymers for Aerospace Applications

Novel Activation, Modeling, Characterization and Design

Edited by: Gyaneshwar Tandon, Amber McClung and Jeff Baur

This contributed volume investigates the parameters of shape-memory polymers (SMPs) required by aerospace, including synthesis, characterization, activation, and application in aircraft and space vehicles. It explains the chemistry and design of novel SMPs to meet the special demands of aeronautic performance, including heat and impact resistance, limited operational energies, aerodynamics, loading etc. The text analyzes and assesses shape-memory polymers and also composites and hybrid materials designed for use in reconfigurable applications in the military and commercial sectors, especially for morphing aircraft, micro air vehicles, deployable space structures, and adaptive engines. The chapters span novel synthesis, chemistry and activation of shape memory resins, constituent modeling and characterization methods, predictive methodologies, experimental validation, and case studies illustrating material property needs, design requirements and material performance.

978-1-60595-118-8, ©2016, 658 pages, 6x9, HC book, **\$209.50**

2014

Introduction to Polymer Chemistry

A Biobased Approach

Judit Puskas

Designed for polymer and materials engineering students, the text introduces polymer chemistry through polymers found in nature. It explains biobased polymer systems and synthetic systems by exploring the chemistry of natural polymers from plants and animals, as well as self-assembled macromolecular structures, including proteins, lignin, protamers, and fibers. Also covered are synthetic polymerization and emerging advances in green polymer chemistry.

2009

Essentials of Polymer Science and Engineering

Paul C. Painter and Michael M. Coleman

This book is the culmination of decades of imaginative and insightful presentations of polymer science by two of the best-known polymer textbook writers in America. The authors have maintained their informal and humorous literary style and included in this updated text, numerous color illustrations. The book covers the central topics of polymer science and engineering, including polymerization synthesis and kinetics, the application of probability theory, structure and morphology, thermal and solution properties, mechanical properties and processing methods. What makes this book unique (in addition to the authors' well-known style) is the inclusion of brief essays labeled Polymer Milestones and Fascinating Polymers at pertinent points in the text. The former are cameos describing the contributions of great scientists and interesting characters, while the latter consider specific polymers that have interesting histories or unusual properties. The text is designed for both undergraduates and graduate students that are new to the field and is a great source for industrial scientists. The book contains useful reviews and introductions to basic topics and also comes with extensive problem sets and other materials for instructors.

Print: 978-1-932078-75-6, ©2009, 538 pages, 7x10, HC book, **\$194.50**

PLASTICS/POLYMERS

2006

Miscible Polymer Blends

Background and Guide for Calculations and Design

Michael M. Coleman and Paul C. Painter

Offers polymer chemists and engineers a method for very rapidly determining which polymers and co-polymers mix and do not mix. The CD-ROM calculator is designed to aid in determining promising polymer blends for many different applications. A self-guided tutorial on the CD-ROM, as well as an accompanying booklet, presents the theoretical background.

978-1-932078-55-8, ©2006, 40 pages, 6x9, SC book plus CD-ROM, **\$159.50**

Single Screw Design

20 Years of ANTEC: *Practical and Theoretical Technical Papers*

CD-ROM from SPE, Edited by the Extrusion Division

With an Introduction by: Timothy P. Womer, President 2006-2007; Society of Plastics Engineers
Containing 165 full-length technical presentations, this CD-ROM is a virtual encyclopedia of practical information on single-screw extrusion: from design, to scale up—to melts, modeling and monitoring—with many product applications.

0-9753707-4-X, ©2006, CD-ROM housed in plastic jewel case, **\$99.00**

2004

Painter and Coleman on Polymers

Disk One—***Polymer Science and Engineering*** (with optional Workbook)

Disk Two—***The Incredible World of Polymers: Tales of Innovation, Serendipity and Perseverance***

Paul C. Painter and Michael Coleman

This 2-CD-ROM set with supplemental Workbook gives students and professionals the best features of a comprehensive introduction to polymers, along with animated movies, hundreds of interactive illustrations, and a fully interlinked glossary of polymer terms, equations, and formulas.

978-1-932078-23-7, 2004, 2-CD-ROM Set in CD Folder.

Regular Price: **\$55.00** (2-CD-ROM Set)

Student Price: **\$39.95**

CD Sets For PC Only—CD-ROM available on Macintosh with special request.

Workbook: 978-1-932078-23-7B, 100 pages, 8.5x11, spiral bound SC, **\$37.50**

2003/2001

2002 End-Use Market Survey on the Polyurethane Industry in the U.S., Canada and Mexico

OUT-OF-PRINT

2000 End-Use Market Survey on the Polyurethane Industry in the U.S., Canada and Mexico

Prepared by Ducker Research Company, Inc.; Sponsored by the Alliance for the Polyurethanes Industry (API)

RELIABILITY ENGINEERING

2002 new/updates

Robust Engineering Design-By-Reliability with Emphasis on Mechanical Components and Structural Reliability, Volume 1

Dimitri B. Kececioglu

This book, written by the world's foremost expert in Reliability Engineering, is the first to provide an advanced methodology to achieve optimum designed-in reliability of products and components.

978-1-932078-07-7, ©2002, 722 pages, 6x9, HC book, **\$109.50**

Burn-In Testing—

Its Quantification and Optimization

Dimitri B. Kececioglu and Feng-Bin Sun

Burn-in testing (an alternative to ESS) is widely used as an aid in producing failure-free electronic components. When scientifically planned and conducted, burn-in-testing offers one of the most effective methods of reliability screening at the component level.

978-1-932078-06-0, ©1997, updated 2002, 698 pages, 6x9, HC book, **\$99.50**

Environmental Stress Screening—

Its Quantification, Optimization and Management

Dimitri B. Kececioglu and Feng-Bin Sun

With the growth of the electronics industry, environmental stress screening (ESS) has become an essential tool for the production of failure-free electronic assemblies, modules and systems.

978-1-932078-04-6, ©1993, updated 2002, 548 pages, 6x9, HC book, **\$99.50**

Reliability & Life Testing Handbook, Volume 1

Dimitri B. Kececioglu

Each volume is a complete guide and reference to product reliability testing. Encyclopedic in scope, it covers all steps from planning and test selection to test procedure and results analysis. Volume 1 delivers must-have information on a variety of distributions, including the Chi-Square, Exponential, Normal, Lognormal, Weibull, Gamma, and others.

978-1-932078-02-2, ©1993, updated 2002, 941 pages, 6x9, HC book, **\$99.50**

Reliability & Life Testing Handbook, Volume 2

Dimitri B. Kececioglu

This volume includes the binomial tests of comparison and up-to-date information on Accept-Reject Tests, the Sequential Probability Ratio Test, Bayesian MTBF and Reliability Demonstration Tests, as well as other very important accelerated tests such as Arrhenius, Eyring, Bazovsky, and Inverse Power Law.

978-1-932078-03-9, ©1993, updated 2002, 877 pages, 6x9, HC book, **\$99.50**

Maintainability, Availability & Operational Readiness Engineering Handbook, Volume 1

Dimitri B. Kececioglu

Preventive maintenance engineering can significantly contribute to productivity and cost-reduction in any industry dependent upon machinery and equipment. This handbook provides a comprehensive guide to advanced strategies and procedures for this vital function.

978-1-932078-05-3, ©1992, updated 2002, 803 pages, 6x9, HC book, **\$99.50**

RELIABILITY ENGINEERING

2002 updates

Reliability Engineering Handbook, Volume 1

Dimitri B. Kececioglu

The demand for reliable products, components, and systems has never been greater, especially among organizations seeking greater competitiveness in world markets. This handbook is widely used in engineering education and industrial practice. It provides a comprehensive, systematic presentation of today's reliability engineering for optimized design engineering of products, parts, components and equipment.

978-1-932078-00-8, ©1991, updated 2002, 720 pages, 6x9, HC book, **\$99.50**

Reliability Engineering Handbook, Volume 2

Dimitri B. Kececioglu

Expanding on the coverage provided in Volume 1, Volume 2 covers the prediction of equipment and system reliability for the series, parallel, standby, and conditional function configuration cases and discusses the prediction of the reliability of complex components, equipment, and systems with multimode function and logic, multistress level of function, load sharing function mode, static switches, cyclic switches, and fault tree analysis.

978-1-932078-01-5, ©1991, updated 2002, 576 pages, 6x9, HC book, **\$99.50**

SPORTS INSTRUCTION

2008

Series in the Chinese Kung Fu style of Iron Palm by Grandmaster Brian Gray

Iron Palm Fundamentals

This is the conditioning book. The book details how to condition the hand to withstand pressure of Iron Palm strikes, the changing process that gives a practitioner a deadly palm, as well as the physics for breaking objects. Also outlines how to avoid the pitfalls of training with fraudulent teachers and the damage from improper training.

978-1-932078-89-3, ©2008, 110 pages, 7x10, SC book, **\$19.95**

Advanced Iron Palm

This book deals with learning how to intensify the potential in the student's striking skills and differences between external and internal breaking theories.

978-1-932078-90-9, ©2008, 87 pages, 7x10, SC book, **\$19.95**

Applied Iron Palm

The book begins with an overview of theories and answers to questions and discoveries in light of earlier learning from knowledge gained from the first two books. The book deals with applying the knowledge and how to use the palm in self-defense. The book also teaches how to make Grandmaster Gray's famous Iron Palm liniment.

978-1-932078-91-6, ©2008, 112 pages, 7x10, SC book, **\$19.95**

Iron Palm Form

Although there has never been a form for the Iron Palm, the reason is contained in this book. The author created Iron Palm form so that martial artists and non-martial artists would be able to practice self-defense techniques that coordinate with the Iron Palm theories. Regardless of a person's level or martial art style, this form gives theory and application for a three-dimensional regimen.

978-1-932078-92-3, ©2008, 66 pages, 7x10, SC book, **\$19.95**

**Visit ultimateironpalm.com for more information
and ordering any book or the entire series.**

2006

Baseball's Forgotten Basics

A Field Manual and Instructional DVD • For Coaches, Parents and Players

Marc Shoenfelt

Written by a professional baseball instructor and educator, the book and 99-minute instructional DVD combination puts on your bookshelf and home television the little things that are overlooked in other volumes but add up to solid baseball technique. Designed to give younger players of all skill levels solid fundamentals, with safety and fun in mind, these basics of baseball form a foundation that will make any player better.

978-1-932078-53-4, ©2006, Book/DVD, 181 pages, 7x10, SC book, **\$29.95**

**Visit baseballsforgottenbasics.com for more information

UTILITY MANAGEMENT

2012

Creating and Managing Sustainable Organizations

Roopchan Lutchman

Explains how to form and manage a self-sustaining business or public utility by providing techniques organizations must apply to remain adaptable and meet the needs of customers and employees while facing a variety of business challenges, from worker quality to increasing costs and global competition. The book includes numerous examples from the public and private sectors.

978-1-60595-041-9, ©2012, 160 pages, 6x9, SC book, **\$59.95**

2006

Sustainable Asset Management

Linking Assets, People, and Processes for Results

Roopchan Lutchman

This book, by one of North America's leading specialists, presents new ways of maintaining and improving assets in utilities and manufacturing environments.

978-1-932078-47-3, ©2006, 270 pages, 6x9, HC book, **\$69.50**

2004

Computerized Work Management Systems for Utility and Plant Operations

Roopchan Lutchman

This book shows how new computerized technologies can be used to create more cost-effective work management—and improved asset management.

978-1-932078-30-5, ©2004, 207 pages, 6x9, HC book, **\$59.50**

ACADEMIC JOURNALS

List of refereed journals published by DEStech. Each journal is edited by a university-based expert assisted by an editorial board comprising selected subject specialists. DEStech journals are open access with complete contents available at no cost to readers through the company's website, www.destechpub.com/journals. Any issue is available in print for a cost. Librarians and others requiring further information about all DEStech journals are invited to visit www.destechpub.com/journals.

Frontiers in Aerospace Engineering

Editor-in-Chief: Pizhong Qiao, Ph.D., Washington State University

Publishes novel investigations into all phases of commercial and military aircraft, rocket and satellite technology—from construction to deployment. Journal covers structures & materials, aerodynamics, energetics & propulsion, flight mechanics and control systems, as well as guidance, electronics, warfare strategies and air defenses.

ISSN: 2325-6796 (Print) ISSN: 2325-6788 (Online), Frequency: Biannual

International Journal of Agricultural Science and Technology

Editor-in-Chief: Prof. Dr. Yanbo Huang, Ph.D.

United States Department of Agriculture, USA

International Journal of Agricultural Science and Technology (IJAST) is an internationally refereed, peer reviewed open access journal dedicated to publishing original, innovative, and integrated researches of the latest advancements in all the areas in agricultural science and technology.

ISSN: 2327-7645 (Online) ISSN 2327-7246 (Print), Frequency: Biannual

International Journal of Computer Science and Application

Editor-in-Chief: Prof. Avireni Srinivasulu, Vignan University, India

International Journal of Computer Science and Application (IJCSA) was founded in 2012. It is devoted to bridging the advancement of knowledge in all fields of Computer Science. Topics include Computational mathematics; Software and hardware manufacturers; Machine Intelligence; Data and Web Mining; Data and Information Systems; Graphics and Imaging; Quantum Computing; Robotics and Micro-Robotics; Computational Mathematics; Social Network Mining, Computer Networks, etc.

ISSN: 2324-7037 (Print) ISSN 2324-7134 (Online), Frequency: Biannual

International Journal of Materials Science

Editor-in-Chief: Adel Mohamed, Ph.D., University of Quebec, Canada

The International Journal of Material Science (IJMSCI) is published biannually and focuses on material science, technology and application. This journal offers an international platform for experts, researchers and scholars to communicate, explore, and discuss knowledge in the field of material science.

ISSN: 2226-4531 (Print) ISSN: 2226-4523 (Online), Frequency: Biannual

Journal of Multifunctional Composites

Editor-in-Chief: Gaurav Nilakantan, Ph.D., University of Southern California

Focus is on dissemination of original investigations into modeling, designing and processing functionalized composite materials including active, piezoelectric, morphing and adaptive composites and nanocomposites, their components, performance and applications.

ISSN: 2168-4278 (Print) ISSN: 2168-4286 (Online)

To view complete detailed information on these titles visit our website:

ACADEMIC JOURNALS

Journal of Petroleum Science Research

Editor-in-Chief: Dr. Shengkai Duan, Chevron Energy

Disseminates research on petroleum discovery, production and chemistry, including work on reservoir modeling, production optimization, flow analysis, refining, combustion, testing, and engineering of petroleum into a variety of products.

ISSN: 2168-5517 (Print) ISSN: 2168-5533 (Online), Frequency: Quarterly

Journal of Residuals Science and Technology

Editor-in-Chief: P. Brent Duncan, Ph.D., University of North Texas

Journal provides selective outlet for research on the fate, transport and ecological effects of residual contaminants released by environmental technologies such as wastewater treatment, sludge composting, incineration, soil injection and land application.

ISSN: 1544-8053 (Print) ISSN: 2376-578X (Online), Frequency: Quarterly

RETURN INFORMATION

We believe in offering the very best in technical information products. If you are not completely satisfied with a product purchased from DEStech Publications, it can be returned in new and unused condition within 30 days for a refund of the purchase price less the cost of shipping. DEStech will reimburse the cost of shipping for returns of any item sent in error. Please ship the item back to DEStech, along with a copy of the receipt or packing slip, by a method that is insured and traceable. Items that are not in new and unused condition will not be accepted for refund or exchange. Please include a copy of the receipt or invoice along with the product & original packaging.

ORDERING INFORMATION

Delivery Information:

U.S.: Orders are shipped via UPS ground or US Mail and will normally arrive within 1-5 days from receipt of order.

Canada: Orders are shipped via UPS International Standard or US Mail and will normally arrive within 3-5 days from receipt of order.

All Other Countries: Orders are shipped via USPS Priority Mail International and will normally arrive within 6-10 business days from receipt of order.

Shipping Cost:

U.S.: Shipping and handling charges for mixed or single titles of any DEStech book or CD-ROM: One copy \$12.00; additional copies \$3.00 per copy of any book or CD.
